Subject: Final Environmental Impact Statement Replacement Robley Rex VA Medical Center, Louisville, Kentucky

Dear Ms. Lutz,

The United States (U.S.) Department of Veterans Affairs (VA) announced in May 2011 its determination of need to replace the existing Robley Rex VA Medical Center (VAMC) in Louisville, Kentucky, to meet the current and future needs of VA’s healthcare mission in the region.

Enclosed is the Final Environmental Impact Statement (FEIS) prepared by the VA for the siting, construction, and operation of a new campus to replace the existing Robley Rex VA Medical Center (VAMC), Veterans Benefits Administration (VBA) regional office, and three community-based outpatient clinics (CBOC) in Louisville, Kentucky. This FEIS identifies, analyzes, and documents the potential physical, environmental, cultural, and socioeconomic impacts associated with siting, constructing, and operating a replacement 104-bed hospital, diagnostic and treatment facilities, VBA regional office, and required site amenities and improvements on a new campus.

The potential environmental impacts of three alternatives are analyzed in this FEIS. Alternatives A and B evaluate different locations for a replacement VAMC. Alternative C is the No Action alternative, which is required by NEPA and its regulations and also provides a baseline for comparing potential impacts from the action alternatives.

The FEIS describes mitigation measures for the potential impacts to environmental resources that are identified in the impact analysis. Unavoidable adverse impacts include effects to air quality, aesthetics, noise, land use, solid waste and hazardous materials, utilities, and transportation and traffic. With the exception of aesthetics, land use and traffic, implementation of specified mitigation measures would substantially decrease the magnitude of these impacts.

Pursuant to the National Environmental Policy Act (NEPA), VA has considered comments received on the Draft EIS, which was issued in October 2016, and in the Final EIS identifies VA’s preferred alternative. VA will publish a Record of Decision no sooner than 30 days after publication of the U.S. Environmental Protection Agency's Notice of Availability in the Federal Register.
Lara Lutz, Contracting Officer

The 2017 FEIS is available for viewing on the VA website at: www.louisville.va.gov/newmedicalcenter/. Copies of the FEIS are also available in the following locations: at the St. Matthews and Westport Branches of the Louisville Free Public Library located at 3940 Grandview Avenue, Louisville, KY 40207 and 8100 Westport Road, Louisville, KY 40222, respectively. FOR FURTHER INFORMATION CONTACT: Replacement VAMC Activation Team Office, 800 Zorn Avenue, Louisville, KY 40206 or by email to Louisville ReplacementHospitalComments@va.gov.

April 7, 2017

The Honorable Mitch McConnell
601 W. Broadway, Room 630
Louisville, KY  40202

Subject:  Final Environmental Impact Statement Replacement Robley Rex VA Medical Center,
Louisville, Kentucky

Dear Senator McConnell,

The United States (U.S.) Department of Veterans Affairs (VA) announced in May 2011 its determination of need to replace the existing Robley Rex VA Medical Center (VAMC) in Louisville, Kentucky, to meet the current and future needs of VA's healthcare mission in the region.

Enclosed is the Final Environmental Impact Statement (FEIS) prepared by the VA for the siting, construction, and operation of a new campus to replace the existing Robley Rex VA Medical Center (VAMC), Veterans Benefits Administration (VBA) regional office, and three community-based outpatient clinics (CBOC) in Louisville, Kentucky. This FEIS identifies, analyzes, and documents the potential physical, environmental, cultural, and socioeconomic impacts associated with siting, constructing, and operating a replacement 104-bed hospital, diagnostic and treatment facilities, VBA regional office, and required site amenities and improvements on a new campus.

The potential environmental impacts of three alternatives are analyzed in this FEIS. Alternatives A and B evaluate different locations for a replacement VAMC. Alternative C is the No Action alternative, which is required by NEPA and its regulations and also provides a baseline for comparing potential impacts from the action alternatives.

The FEIS describes mitigation measures for the potential impacts to environmental resources that are identified in the impact analysis. Unavoidable adverse impacts include effects to air quality, aesthetics, noise, land use, solid waste and hazardous materials, utilities, and transportation and traffic. With the exception of aesthetics, land use and traffic, implementation of specified mitigation measures would substantially decrease the magnitude of these impacts.

Pursuant to the National Environmental Policy Act (NEPA), VA has considered comments received on the Draft EIS, which was issued in October 2016, and in the Final EIS identifies VA's preferred alternative. VA will publish a Record of Decision no sooner than 30 days after publication of the U.S. Environmental Protection Agency's Notice of Availability in the Federal Register.

The 2017 FEIS is available for viewing on the VA website at: www.louisville.va.gov/newmedicalcenter/. Copies of the FEIS are also available in the following locations: at the St. Matthews and Westport Branches of the Louisville Free Public Library.

Enclosure: Electronic copy of Final Environmental Impact Statement on disc
April 7, 2017

Doug Dawson, Chief
Environmental Section
Kentucky Department of Fish and Wildlife Resources
#1 Sportsman’s Lane
Frankfort, KY 40601

Subject: Final Environmental Impact Statement Replacement Robley Rex VA Medical Center, Louisville, Kentucky

Dear Mr. Dawson,

The United States (U.S.) Department of Veterans Affairs (VA) announced in May 2011 its determination of need to replace the existing Robley Rex VA Medical Center (VAMC) in Louisville, Kentucky, to meet the current and future needs of VA’s healthcare mission in the region.

Enclosed is the Final Environmental Impact Statement (FEIS) prepared by the VA for the siting, construction, and operation of a new campus to replace the existing Robley Rex VA Medical Center (VAMC), Veterans Benefits Administration (VBA) regional office, and three community-based outpatient clinics (CBOC) in Louisville, Kentucky. This FEIS identifies, analyzes, and documents the potential physical, environmental, cultural, and socioeconomic impacts associated with siting, constructing, and operating a replacement 104-bed hospital, diagnostic and treatment facilities, VBA regional office, and required site amenities and improvements on a new campus.

The potential environmental impacts of three alternatives are analyzed in this FEIS. Alternatives A and B evaluate different locations for a replacement VAMC. Alternative C is the No Action alternative, which is required by NEPA and its regulations and also provides a baseline for comparing potential impacts from the action alternatives.

The FEIS describes mitigation measures for the potential impacts to environmental resources that are identified in the impact analysis. Unavoidable adverse impacts include effects to air quality, aesthetics, noise, land use, solid waste and hazardous materials, utilities, and transportation and traffic. With the exception of aesthetics, land use and traffic, implementation of specified mitigation measures would substantially decrease the magnitude of these impacts.

Pursuant to the National Environmental Policy Act (NEPA), VA has considered comments received on the Draft EIS, which was issued in October 2016, and in the Final EIS identifies VA’s preferred alternative. VA will publish a Record of Decision no sooner than 30 days after publication of the U.S. Environmental Protection Agency's Notice of Availability in the Federal Register.
Doug Dawson, Chief

Dave Marchal, Construction Review Manager
Construction Review
444 South Fifth Street
Louisville, Kentucky 40202

Subject: Final Environmental Impact Statement Replacement Robley Rex VA Medical Center, Louisville, Kentucky

Dear Mr. Marchal,

The United States (U.S.) Department of Veterans Affairs (VA) announced in May 2011 its determination of need to replace the existing Robley Rex VA Medical Center (VAMC) in Louisville, Kentucky, to meet the current and future needs of VA’s healthcare mission in the region.

Enclosed is the Final Environmental Impact Statement (FEIS) prepared by the VA for the siting, construction, and operation of a new campus to replace the existing Robley Rex VA Medical Center (VAMC), Veterans Benefits Administration (VBA) regional office, and three community-based outpatient clinics (CBOC) in Louisville, Kentucky. This FEIS identifies, analyzes, and documents the potential physical, environmental, cultural, and socioeconomic impacts associated with siting, constructing, and operating a replacement 104-bed hospital, diagnostic and treatment facilities, VBA regional office, and required site amenities and improvements on a new campus.

The potential environmental impacts of three alternatives are analyzed in this FEIS. Alternatives A and B evaluate different locations for a replacement VAMC. Alternative C is the No Action alternative, which is required by NEPA and its regulations and also provides a baseline for comparing potential impacts from the action alternatives.

The FEIS describes mitigation measures for the potential impacts to environmental resources that are identified in the impact analysis. Unavoidable adverse impacts include effects to air quality, aesthetics, noise, land use, solid waste and hazardous materials, utilities, and transportation and traffic. With the exception of aesthetics, land use and traffic, implementation of specified mitigation measures would substantially decrease the magnitude of these impacts.

Pursuant to the National Environmental Policy Act (NEPA), VA has considered comments received on the Draft EIS, which was issued in October 2016, and in the Final EIS identifies VA’s preferred alternative. VA will publish a Record of Decision no sooner than 30 days after publication of the U.S. Environmental Protection Agency’s Notice of Availability in the Federal Register.

The 2017 FEIS is available for viewing on the VA website at: www.louisville.va.gov/newmedicalcenter/. Copies of the FEIS are also available in the following

Subject: Final Environmental Impact Statement Replacement Robley Rex VA Medical Center, Louisville, Kentucky

Dr. Ms. Swartz,

The United States (U.S.) Department of Veterans Affairs (VA) announced in May 2011 its determination of need to replace the existing Robley Rex VA Medical Center (VAMC) in Louisville, Kentucky, to meet the current and future needs of VA’s healthcare mission in the region.

Enclosed is the Final Environmental Impact Statement (FEIS) prepared by the VA for the siting, construction, and operation of a new campus to replace the existing Robley Rex VA Medical Center (VAMC), Veterans Benefits Administration (VBA) regional office, and three community-based outpatient clinics (CBOC) in Louisville, Kentucky. This FEIS identifies, analyzes, and documents the potential physical, environmental, cultural, and socioeconomic impacts associated with siting, constructing, and operating a replacement 104-bed hospital, diagnostic and treatment facilities, VBA regional office, and required site amenities and improvements on a new campus.

The potential environmental impacts of three alternatives are analyzed in this FEIS. Alternatives A and B evaluate different locations for a replacement VAMC. Alternative C is the No Action alternative, which is required by NEPA and its regulations and also provides a baseline for comparing potential impacts from the action alternatives.

The FEIS describes mitigation measures for the potential impacts to environmental resources that are identified in the impact analysis. Unavoidable adverse impacts include effects to air quality, aesthetics, noise, land use, solid waste and hazardous materials, utilities, and transportation and traffic. With the exception of aesthetics, land use and traffic, implementation of specified mitigation measures would substantially decrease the magnitude of these impacts.

Pursuant to the National Environmental Policy Act (NEPA), VA has considered comments received on the Draft EIS, which was issued in October 2016, and in the Final EIS identifies VA’s preferred alternative. VA will publish a Record of Decision no sooner than 30 days after publication of the U.S. Environmental Protection Agency's Notice of Availability in the Federal Register.

The 2017 FEIS is available for viewing on the VA website at: www.louisville.va.gov/newmedicalcenter/. Copies of the FEIS are also available in the following locations: at the St. Matthews and Westport Branches of the Louisville Free Public Library.
